Art Unit: 1621

1. Claims 1-16 are pending in this application which should be reviewed for errors.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 11 depends on itself.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nordquist et al. Nordquist et al. disclose chitosan-derived biomaterials wherein the chitosan is glycosylated with sugars including galactose. Schiff base and Amadori products are also disclosed (s. second

Art Unit: 1621

paragraph in column 9). Acidification to a pH of 5.5 is disclosed (s. Col. 9, ll. 44-48). Use of the glycated chitosans to form films such as on teeth or as skin substitutes is also disclosed (s. Col. 13, bottom). The instant invention differs from the teaching of Nordquist et al. in that the viscosity of the solutions are not disclosed. However, in view of the amounts of solvent and ingredients used in the examples, overlapping compositions would appear to be formed. It would have been prima facie obvious at the time the invention was made to one of ordinary skill in the art to start with the teaching of Nordquist et al., to make applicants compositions and to expect them to be useful in the treatment of cancer, in skin substitutes, pharmaceutical formulations, etc. The exact ratio of reactants and strength of solution could be determined empirically depending on the use.

6. No claim is allowed.
